Issue #	Issue Description	Impact on Project	Date Reported	Priority (M/H/L)	Due Date	Assigned to	Status	Comments
1	Inadequate hardware provided to the group	Were unable to connect base station to UE due to only having one allocated computer	10/06	H	10/06	Sam & Chris	Mitigated	Team was given one stationary PC in R&D lab to use with security policies impacting usage of the computer. Team members decided to run Ubuntu virtualised on their own personal laptops
2	Technical incompatibility with laptops running virtualised Ubuntu and B205-mini radio modules	Project schedule pushed back slightly	17/07	H	17/06	Kat	Mitigated	Issue was resolved by providing refurbished laptops from one teammate's workplace.
3	Technical difficulties with hosting files on Teams channel	Teammates who were using macOS were unable to access files hosted on the SharePoint site	20/08	M	23/08	Ed	Mitigated	Files were migrated to GitHub, which we intended to use for all our file hosting purposes for the final project.
4	Technical difficulties running srsGUI for virtualisation purposes	Spent a day troubleshooting and concluded usage of the full srsRAN package may not be necessary if	23/08	L	23/08	Kat & Chris	Mitigated	Reassessed and decided against using srsGUI for imaging purposes and running from terminal instead to showcase connectivity between two endpoints.

		srsUE, srsENB, srsEPC are functional						
5	Ongoing lack of communication from one teammate	Increased workload on other teammates	09/10	H	09/10	All	Mitigated	Had meeting with Ramesh on 14/10, during which we were tasked with preparing a spreadsheet detailing our individual contributions which will allow us to be marked as a group of four rather than five. Reassessed project deliverables and decided upon consultation with Edmund that the Ansible automation component will no longer be necessary for the portfolio.
