

## Team Meeting – 12/03/2024

### Present:

- Edward Keith
- Chris Escandor
- William Bigley
- Samuel Canthro
- Katarina Milicevic

### Notes:

- Apparatus for testing the 6G is unavailable widely so we will be using 5G
- Function of srsEPC (core network) is being fulfilled by USRRP module
- Edmund specified to use Docker
- Documentation is key – everything should be documented as that is the main deliverable for the project
- Methodology : preferable – secSDLC
- At least one device should be connected, but ideally two would be better
- No accounting for QoS, automatic connection, etc
- Documentation on Github for setting up development environment
- Need to identify and solve roadblocks, document troubleshooting etc
- Way better to underpromise and overdeliver – don't be afraid of very realistic deadlines

### For next time:

- Research & determine methodology
- Explore worklog techniques
-
